

## **AMENDMENTS TO THE CLAIMS**

### **Claims 1-54 (Cancelled)**

**Claim 55 (Currently Amended)** A voice output apparatus comprising:

a text display unit operable to display a text message which is information to be transmitted to a user;

a delay determination unit operable to determine a delay time according to a ~~form display mode~~ of the text message displayed by said text display unit, the delay time being a time necessary for an action taken by the user to visually identify a text message after the text message is displayed by said text display unit; and

a voice output unit operable to output, via a voice message, the information to be transmitted, ~~the voice message being output~~ when the delay time determined by said delay determination unit passes after the text message is displayed by said text display unit.

**Claim 56 (Currently Amended)** The voice output apparatus according to claim 55, wherein said delay determination unit is operable to:

determine that the delay time should be short in ~~the a~~ a case where ~~the a~~ a size of characters in the text message displayed by said text display unit is large; and

determine that the delay time should be long in ~~the a~~ a case where the size of the characters is small.

**Claim 57 (Currently Amended)** The voice output apparatus according to claim 55,

——wherein said delay determination unit is operable to:

determine that the delay time should be long in ~~the~~ a case where a distance between a focal point and characters in the text message displayed by said text display unit is long, the focal point being set on said text display unit for attracting the user's attention; and

determine that the delay time should be short in ~~the~~ a case where the distance is short.

**Claim 58 (Currently Amended)** The voice output apparatus according to claim 55,

——wherein said delay time determination unit is operable to:

determine that the delay time should be short in a case where a contrast between a color at a position and a color of characters in the text message is large, the position being a position, on said text display unit, onto which the user focuses ~~his/her~~ their attention; and

determine that the delay time should be long in ~~the~~ a case where the contrast is small.

**Claim 59 (Currently Amended)** The voice output apparatus according to claim 55,

——wherein said delay determination unit is operable to:

determine that the delay time should be short in ~~the~~ a case where a degree of flashing ~~the~~ characters in the text message displayed by the text display unit is high; and

determine that the delay time should be long in ~~the~~ a case where the degree of flashing is low.

**Claim 60 (Currently Amended)** The voice output apparatus according to claim 55, further comprising[[:]]

——a personal information obtainment unit operable to obtain an age of the user,

wherein said delay determination unit is operable to:

determine that the delay time should be long in ~~the~~ a case where the obtained age is high; and

determine that the delay time should be short in ~~the~~ a case where the obtained age is low.

**Claim 61 (Currently Amended)** The voice output apparatus according to claim 55, further comprising[[:]]

——a habituation specifying unit operable to obtain ~~the~~ a number of times the user operates said voice output apparatus,

wherein said delay determination unit is operable to:

determine that the delay time should be short in the a case where the obtained number of operations is large; and

determine that the delay time should be long in ~~the~~ a case where the obtained number of operations is small.

**Claim 62 (Currently Amended)** The voice output apparatus according to claim 55, further comprising[[:]]

——a habituation specifying unit operable to obtain an operation time during which the user operates said voice output apparatus,

wherein said delay determination unit is operable to:

determine that the delay time should be short in the a case where the obtained operation time is long; and

determine that the delay time should be long in ~~the~~ a case where the obtained operation time is short.

**Claim 63 (Currently Amended)** The voice output apparatus according to claim 57,  
——wherein said text display unit is operable to display an agent as the focal point.

**Claim 64 (Currently Amended)** A voice output method used by an information processing apparatus to output a voice message, said voice output method comprising:

displaying, on a text display unit, a text message which is information to be transmitted to a user;

determining a delay time according to a form display mode of the text message displayed-  
~~by said text display unit in said displaying~~, the delay time being a time necessary for an action taken by the user to visually identify a text message after the text message is displayed by in said displaying-text display unit; and

outputting, via a voice message, the information to be transmitted, the voice message being output when the delay time determined in said determining ~~by said delay determination-unit~~ passes after the text message is displayed in said displaying ~~by said text display unit~~.

**Claim 65 (Currently Amended)** The voice output method according to claim 64,  
——wherein said determining includes:

determining that the delay time should be short in ~~the a~~ case where ~~the a~~ size of characters in the text message displayed in said displaying-by-said text display unit is large; and

determining that the delay time should be long in ~~the a~~ case where the size of the characters is small.

**Claim 66 (Currently Amended)** The voice output method according to claim 64,  
——wherein said determining includes:

determining that the delay time should be long in ~~the a~~ case where a distance between a focal point and characters in the text message displayed in said displaying-by-said text display unit is long, the focal point being set on ~~said the~~ text display unit for attracting the user's attention; and

determining that the delay time should be short in ~~the a~~ case where the distance is short.

**Claim 67 (Currently Amended)** The voice output method according to claim 64,  
——wherein said determining includes:

determining that the delay time should be short in ~~the a~~ case where a contrast between a color at a position and a color of characters in the text message is large, the position being a position, on ~~said the~~ text display unit, onto which the user focuses their ~~his/her~~ attention; and

determining that the delay time should be long in ~~the a~~ case where the contrast is small.

**Claim 68 (Currently Amended)** The voice output method according to claim 64,  
——wherein said determining includes:

determining that the delay time should be short in ~~the a~~ case where a degree of flashing-  
the characters in the text message displayed ~~by~~ in the text display unit is high; and

determining that the delay time should be long in ~~the a~~ case where the degree of flashing  
is low.

**Claim 69 (Currently Amended)** The voice output method according to claim 64, further  
comprising[[:]]

obtaining an age of the user, wherein said determining includes:  
determining that the delay time should be long in ~~the a~~ case where the obtained age is high; and  
determining that the delay time should be short in ~~the a~~ case where the obtained age is low.

**Claim 70 (Currently Amended)** The voice output method according to claim 64, further  
comprising[[:]]

——obtaining ~~the a~~ number of times the user operates the information processing said voice-  
~~output~~ apparatus, wherein said determining includes:

determining that the delay time should be short in ~~the a~~ case where the obtained number  
of operations is large; and

determining that the delay time should be long in ~~the a~~ case where the obtained number  
of operations is small.

**Claim 71 (Currently Amended)** The voice output method according to claim 64, further  
comprising[[:]]

——obtaining an operation time during which the user operates ~~said~~ the information processing-voice output apparatus, wherein said determining includes:

determining that the delay time should be short in ~~the~~ a case where the obtained operation time is long; and

determining that the delay time should be long in ~~the~~ a case where the obtained operation time is short.

**Claim 72 (Currently Amended)** The voice output method according to claim 66,  
wherein said displaying includes displaying an agent as the focal point.
